Confluence Wiki - Outage occurred Thursday April 20, into Friday April 21. The vendor and DoIT service teams coordinated to perform root cause analysis. After analysis, adjusting settings per vendor's recommendation stabilized Confluence. Before closing the outage, the team continued to monitor and stress test the service. This extended the outage, but ensured the stability of the service.

JIRA Issue Tracking - This was a degradation of service. The service was available to all users. At 10:06 a.m. Tuesday April 18, 2023, a user reported Jira email notifications stopped sending around 1:15 p.m. on Monday April 17, 2023. The issue was resolved within 1 hour of being reported.

GitLab Repository Services - The March degradation of service issue continued into April, with repairs concluding on Tuesday April 4th.

# DoIT OPERATIONS: USER SERVICES - DEPARTMENTAL SUPPORT OVERVIEW

## Departmental Support - Annual Contacts

Notes: Departmental Support Annual Contacts represent cases resolved by DS teams.

## DoIT OPERATIONS: USER SERVICES - DEPARTMENTAL SUPPORT METRICS

NOTES: \*Cost per endpoint methodology updated for December 2021 to eliminate "complexity" as a variable and expand sample size. Gartner includes the costs of voice, peripherals, software, and external services, which we have not, as there are alternative funding models for those items. Prior values are not directly comparable to the updated methodology, and will not be recalculated. Updates will be processed annually.

\*\*DS Endpoints per technician calculation updated for FY2023 to include AIMS endpoints and technicians, including mobile devices. Previous years values retained for historical reference and do not include mobile devices. Updated calculation redefines technician as a person rather than based on hours worked, and adds 56% of Infolab computers as managed endpoints. Calculation updated twice annually. Updated January 2023.

\*\*\*Survey respondents rate satisfaction on a 7 point scale in response to: 'We value your opinion. How was your experience with us?'

-Availability is for wired (not wi-fi) connectivity at each institution. Availability calculated as total uptime / total time per month. Wide Area Network is considered down when completely disconnected from the system (i.e. both routers down at 4-year schools, the single router down at 2-year schools). Any planned outages are included in the calculations, sometimes making availability appear below commercial standards of 99.9% or 99.99% uptime.  
 -The 99.9% SLA rate with UW System is for unplanned outages; the figures in this table include all outages – planned or unplanned. SLA faults here (highlighted in RED) may not actually be an SLA agreement fault.

NOTES: Average (mean) network usage includes night and weekend readings of typically much lower traffic. Averages for UW-Madison Campus Internet Access and UW-Madison internet Exchange will likely be lower in summer months than they are during the academic year.

95th percentile usage is a more common industry standard than avg/max/min for measuring utilization; Network Services is working on providing that measure as well in future reports.

A peering exchange, such as the Madison Internet Exchange, enables networks to interconnect directly to each other and exchange IP (Internet) traffic. Peering is the exchange between two independent networks for the benefit of both networks.

The target for WAN speeds is a capacity threshold instead of a specified speed to maintain. When 95th percentile speeds reach about 45-55% of capacity, there is an engineering exploration to determine the cause of increased usage and whether increased capacity is warranted.
